

Indiana State Department of Health

Indiana Childhood lead Poisoning Prevention Program (ICLPPP)

Blood Lead Level Screening and Elevated Levels Legislative Report 2006

	1. Number of Children Tested	2. Children Any Test ≥ 10 µg/ dL	3. Children Venous Tested ≥ 10 µg/ dL	4. Children Capillary Tested ≥ 10 µg/ dL	5. Children Confirm Tested Capillary ≥ 10 µg/ dL	6. Number of Lead Poisoned Children
STATEWIDE	53,708	1,189	573	784	55	628

NOTES ON COLUMNS

- 1.) Number of children under seven (7) tested in calendar year 2006.**
- 2.) Number of children tested with a result $\geq 10 \mu\text{g/ dl}$ (whether confirmed or unconfirmed)**
- 3.) Number of children tested by venipuncture with a result $\geq 10 \mu\text{g/ dl}$ (confirmed)**
- 4.) Number of children tested by capillary test with a result $\geq 10 \mu\text{g/ dl}$ (requires confirmatory test)**
- 5.) Number of children who were confirmed with a second capillary test with a result $\geq 10 \mu\text{g/ dl}$**
- 6.) Number of lead poisoned children who were confirmed with an elevated blood lead level with a result $\geq 10 \mu\text{g/ dl}$**

GENERAL NOTES

All counts are of individual children under seven (7) years old who received any test in 2006.

A test is considered to be in 2006 based on the date the blood was drawn.

Counts pertaining to individuals, which total less than five, are shown as "<5" according to ISDH confidentiality policy.

An elevated blood lead level (EBLL) is a level equal to or greater than ten micrograms of lead per deciliter of blood ($\geq 10 \mu\text{g/ dl}$).

EBLL may be confirmed by any elevated venipuncture test result, or by a second elevated capillary test result.

The source of the data is the ISDH, Childhood Lead Poisoning prevention Program STELLAR and STELLAR "mirror" databases.

Unknown county designation indicates no county was assigned to the child in the STELLAR database

Blood Lead Level Screening and Elevated Levels legislative Report 2006 (by county)
